## Preventive medications list for Connected Care of Arizona and California

In addition to a healthy lifestyle, preventive medications can help people avoid many illnesses and conditions. A consumer-directed health (CDH) plan that includes preventive medications can help support the goal of ongoing good health.

This list provides examples of commonly prescribed preventive medications. The medications are categorized based on the medical conditions that they are used to prevent. This is not an all-inclusive list; only examples of medications in each category are listed. Coverage prior to the deductible being met may not be provided for every dosage form of a listed medication.

This list does not indicate coverage. Please check with your plan administrator and/or benefit information materials if you have questions on coverage. Your cost share will be determined by your plan's medication coverage and formulary plan.

This list is periodically reviewed and updated to ensure that the medications listed meet the criteria for inclusion.

**Medications on this list that are not covered under your plan are not eligible for the preventive medication program. Please note that only the generic equivalent product is available at no cost when a brand has a generic equivalent product available.**
